To Whom It May Concern,

RECOMMENDATION LETTER IN RESPECT OF JAMIU ABDULFATAI

I am writing with great enthusiasm to support the application of Mr. Jamiu Abdulfatai for postgraduate study. Having known Jamiu for (7) seven years, during which I served as his academic mentor at the Federal University Dutsin-Ma, I have had ample opportunity to observe his intellectual growth and his exceptional "quest for knowledge".

Jamiu is a hardworking, intelligent, and inquisitive individual with a probing mind specifically suited for rigorous research. During his undergraduate studies in Physics, he demonstrated a rare ability to bridge theoretical concepts with practical innovation. A testament to this was his final-year project, "**the Design and Construction of a Solar-Powered Drone**" where he successfully integrated renewable energy systems with aerospace engineering. This project highlighted his technical precision and his ability to manage complex, multidisciplinary research tasks.

Among the students I have mentored and recommended over the years, Jamiu stands out as the best in terms of innovation and creativity. His transition into the field of UI/UX design and AI further proves his adaptability and his commitment to applying analytical physics-based thinking to the digital world. His leadership roles in the on-campus organizations like Enactus and the Hult Prize also demonstrate his ability to coordinate knowledge-sharing workshops and lead technical teams effectively.

On a personal level, Jamiu is honest, friendly, and even-tempered. He possesses a pleasant personality that allows him to collaborate seamlessly with colleagues and faculty members alike. I can confirm that he is both physically and emotionally stable, with the maturity required to excel in a high-pressure academic environment abroad.

Without hesitation, I vouch for his character and his academic potential. I highly recommend him for admission and any available funding or scholarships.

Yours sincerely,

Adamu Muhammad Aminu, MNIP

Department of Physics.
