Attributes
Blockchain - Artificial intelligence - Machine Learning

Describing the **Problem**

- **Scattered & Inefficient** → Companies rely on **Twitter, Discord, Telegram, and LinkedIn** to find potential partners, leading to **inconsistent results and wasted time**.
- **No Transparency or Verification** → There's **no easy way to verify credibility**, track past partnerships, or ensure commitments are honored. Fake projects & rug pulls are common.
- **High Entry Barriers for New Projects** → Startups struggle to **connect with established projects, VCs, and ecosystem players**, limiting growth opportunities.
- **Missed Opportunities** → Many potential partnerships **never happen** simply because companies don't know each other exist. There's **no structured discovery mechanism**.
- **Manual & Repetitive Outreach** → Teams spend **countless hours cold messaging**, trying to find the right contacts, instead of focusing on building their product.

Creating the **Solution**

- ✓ **Smart Web3 Matchmaking** → Synqit **automatically connects** companies based on industry, blockchain, followers, and past partnerships—no more scattered searching.'
- ✓ **Verified & Transparent Deals** → Every partnership is **logged on-chain (later phase)** or verified via **social proof & engagement metrics**, reducing scams & fake projects.'
- ✓ **Open Ecosystem Access** → New startups get **visibility & direct access** to top-tier projects, VCs, and launchpads, leveling the playing field.'
- ✓ **AI-Powered Discovery** → Companies **don't need to search manually**—Synqit **suggests ideal partners** based on shared goals, blockchain preferences & funding stage.'
- ✓ **Effortless Networking & Outreach** → One-click partnership requests, **custom intros, event sync, and automated follow-ups**, so teams can focus on building.

 **Enter Synqit: The first structured matchmaking platform for Web3 companies, VCs, launchpads, builders and more!**
